Dear Wolf:

CHANGE FROM MY PRIOR FAX -

Richard got his facts wrong. I just spoke with Chuck Wall. He is sending the document to Richmond via overnight express. It will arrive tomorrow. When it arrives, a copy will be sent to you via overnight express (DHL, etc.). Chuck does not want it sent via fax. The document will contain claims about the state-of-the-science on ETS. What Chuck wants to make sure: Are those claims scientifically accurate (i.e., supportable)? Do we know of anything either from our research or from our knowledge of the literature, etc., that would require changing the claims? If so, how should the language be changed? We should not have to write anything; i.e., verbal feedback to Chuck is all that is required. I would assume that you and Richard and me will talk about the document and then one or all of us will call Chuck. The only other cautionary note from Chuck: The document should not be generally circulated. That means you should feel free to show it to Roemer or Hausmann or whomever you think could provide you with meaningful feedback, but it should go no further. (I'll try and find out if it should be returned to NY or Richmond or if it's o.k. for you to keep it.)

Regards,
